Professional Summary

B.Tech Computer Science and Engineering (Cyber Security) student with interests in cybersecurity, ethical hacking and artificial intelligence. Practical experience in Vulnerability Assessment and Penetration Testing (VAPT), Security Operations Center (SOC) practices, networking, Burp Suite and security reporting through internships and technical projects. Active IEEE student leader with experience in organising technical initiatives, managing teams and developing technology-driven solutions for real-world challenges, with a commitment to continuous learning and responsible innovation.

Education

B.Tech CSE (Cyber Security) *2024 – 2028*
Silver Oak University, Ahmedabad **CGPA: 9.38 / 10.0**

Internship

Cybersecurity Intern *2026 – Present*

- Performed hands-on security testing and reconnaissance in an authorised lab environment as part of internship training
- Conducted directory enumeration and web reconnaissance using tools such as Gobuster and WhatWeb on assigned targets, including an AWS-hosted lab application and Ray Infra's internal timesheet application
- Identified a Broken Access Control vulnerability (OWASP Top 10 #1) by discovering a hard-coded Google Apps Script API endpoint in the timesheet application's frontend source, exposing multiple unauthenticated API actions
- Documented findings in a structured vulnerability report covering reproduction steps, impact analysis and remediation recommendations

Skills & Tools

Cybersecurity: Network Security, Threat Detection, Risk Assessment, Vulnerability Analysis, Secure Systems Design, Adversarial AI, Prompt Injection Analysis, Penetration Testing, Directory Enumeration, Broken Access Control Analysis

Tools: Kali Linux, Wireshark, Nmap, Burp Suite (beginner), Metasploit (beginner), Gobuster, WhatWeb, Splunk (beginner)

Programming & AI: Python, Java, TypeScript, Spring Boot, FastAPI, React, Next.js, Prompt Engineering, LLM Behaviour Analysis

Platforms: Linux (Red Hat certified), GitHub, TryHackMe

Projects

DFIR Analyzer
Digital Forensics and Incident Response Tool — GitHub

- Built a web-based forensic analysis tool that collects system metadata and running process data, analyses processes and presents findings on a centralised dashboard
- Implemented SHA-256 evidence hashing with an integrity manifest to detect tampered evidence files
- Developed a FastAPI backend and React/TypeScript frontend with automated PDF forensic report generation using ReportLab

Fraud Ring Detector
OOPJ Mini Project — GitHub

- Developed a Java and Spring Boot fraud monitoring application with REST APIs for transaction submission, validation and fraud alert review
- Implemented rule-based detection for large transactions, rapid inflow and outflow, repeated rapid transactions and circular transfers
- Secured the application using Spring Security form login, BCrypt password hashing, CSRF protection and role-based access control for Admin, Analyst and User roles

CASE ZERO: The 11:47 Incident
Interactive Digital Forensics Investigation Game — GitHub

- Built an interactive investigation game teaching evidence analysis, timeline reconstruction and suspect interrogation through a fictional cybersecurity case
- Designed gameplay around correlating digital clues, making forensic concepts accessible to students
- Developed using Next.js, TypeScript and Tailwind CSS

Fire.AI — AI-Based Wildfire Threat Detection System
B.Tech 2nd Year IDT Project — Live Demo

- Developed an AI-powered wildfire detection and monitoring system by integrating environmental sensor, satellite and weather data for early risk assessment.
- Leveraged machine learning techniques to analyse fire patterns and support real-time threat prediction.
- Contributed to system architecture, alert generation and risk identification workflows within an interdisciplinary team.
- Built a live dashboard providing real-time monitoring, location tracking and emergency notifications using Python, TensorFlow, OpenCV, React/Next.js and Vercel.

Web Application Penetration Testing Report — Internal Timesheet Application
Cybersecurity Internship Task

- Performed reconnaissance and vulnerability assessment on an internal organisational web application as part of an authorised internship security assessment

- Used directory enumeration tools (Gobuster, WhatWeb) to map application structure and identify exposed endpoints
- Discovered a hardcoded Google Apps Script API URL within the frontend source code, exposing unauthenticated API actions and confirming a Broken Access Control vulnerability
- Prepared a vulnerability report detailing findings, risk impact and remediation steps for the development team

Pixel-Based Cybersecurity Awareness Game (Ongoing)

- Developing a story-driven pixel-art game in a team to teach cybersecurity concepts through gamified missions and security challenges
- Designing mission logic around real-world attack scenarios including phishing, social engineering and network intrusion
- Focused on making security education accessible and engaging for non-technical users

Relevant Experience

Secretary, Silver Oak University IEEE Signal Processing Society Student Branch Chapter
April 2026 – Present

- Leading AI-focused technical initiatives including hackathons, prompt engineering challenges and research events
- Managing end-to-end documentation, communication workflows and event execution for the chapter

Secretary, Silver Oak University IEEE Women in Engineering Student Branch Affinity Group
January 2026 – March 2026

- Led chapter operations, strategic planning and execution of technical and community initiatives
- Coordinated across executive and core committee teams to drive collaboration and outreach

Content Vice Chair, IEEE Committees
May 2025 – December 2025

- Created AI-assisted content workflows for social media, event storytelling and technical reports
- Developed structured prompt frameworks for consistent, high-quality content output

LinkVerse Summer Internship
July 2025

- Delivered web development projects with focus on product thinking and execution workflows
- Built and presented project frameworks demonstrating end-to-end development lifecycle

Certifications

Red Hat Training: Getting Started with Linux Fundamentals (RH104) *Sept 2025*
Red Hat, Inc. — 16 Credit Hours — Verify on Credly

Intro to Splunk (eLearning) *May 2026*
Splunk — 1 Credit Hour

Splunk Enterprise Installation and Configuration (eLearning) *May 2026*
Splunk — 1 Credit Hour

Hackathons & Competitions

Bharatiya Antariksh Hackathon 2025 *2025*
ISRO (Indian Space Research Organisation) — Powered by Hack2Skill

- Successfully submitted an idea for the Bharatiya Antariksh Hackathon 2025, addressing real-world space and technology challenges
- Recognised for innovation, curiosity and commitment in advancing India's space ecosystem
- Certificate Code: 2025H2S06BAH25-P26041

Zomathon — The Data Hackathon *2025*
Coding Ninjas × Eternal (Zomato)

- Actively participated in Zomathon – The Data Hackathon, organised by Coding Ninjas in collaboration with Eternal (Zomato)
- Demonstrated analytical thinking, collaborative problem-solving and data-driven decision making

Areas of Focus

- Practical cybersecurity: threat detection, vulnerability assessment, secure systems
- AI safety: LLM vulnerabilities, adversarial prompting, prompt injection
- Linux, shell scripting and network security fundamentals
- Ethical hacking and CTF problem-solving
